

## The New U-Turn Solar / Self Powered Sound Store

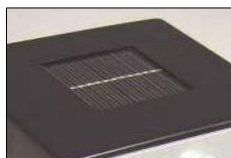

Housed in a rugged weatherproof casing the U-Turn is the environmentally friendly sound store from blackbox-av. It's suitable for both indoor and outdoor use and requires **NO MAINS POWER!**

Visitors choose a message using the selector dial (up to eight message slots are available) and just turn the handle to hear the message. Usually, just a few turns are required to play the whole message; once the message starts to play the visitor can just relax, listen and enjoy.

The unit is totally self-contained and is powered by a combination of an integral solar panel that trickle charges a long life battery pack and the visitor turning the handle on the front plate.

There is virtually no limit to the length of message, though on longer messages the visitor might be asked by the U-Turn to provide a few more turns if the battery needs a boost. The highly energy efficient gearing and optimised electronics ensures that the minimal effort is required by the visitor – it's child's play!

Integral Solar Power

- **No Mains Power Required!**
- Environmentally friendly
- Weatherproof, heavy-duty casing
- Virtually maintenance free
- Both indoor and outdoor use
- Complete stand-alone unit
- User-friendly interactive operation
- Up to eight messages
