

ACC HEADPHONES

What is it?

Reliable, vandal resistant headphones suitable for any application with the public domain. The audio cable is protected by a steel braided cable and our unique 90 degree swivel grommet means the cable will never get fractured.

How does it work?

Simply connect the headphones to your audio playback device using the 6.3mm multi-jack. A mini jack converter is available if required to convert the connection to a 3.5 mini-jack. If your in need of an audio device we recommend an SB Lite which contains on-board amplifier and can output to 2 ACC headphones.

How is it fitted?

The headphones are supplied with a 90 degree swivel knuckle. This can be slotted through a panel or casing to the electronic playback device via the jack connector. The headphone can be hung ready for use.

Technical Info

Frequency Response: 20 - 27.400 Hz
 Nominal Impedance: 300 Ohms
 Acoustical Principle: Closed
 Ear Pads: Synthetic leather, circumaural
 Average pressure on the ear: ~5.5 N
 Weight w/o cable: 220 g
 Connector: Stereo-Multi-Jack 3.5 / 6.3 mm
 Roundcable 3 m

What makes our headphones unique?

The way they are fixed... At the end of each 1.2m armoured cable is a 90 degree knuckle. This knuckle allows the cable to pass through a wall or surface and fixes the headphone in place.

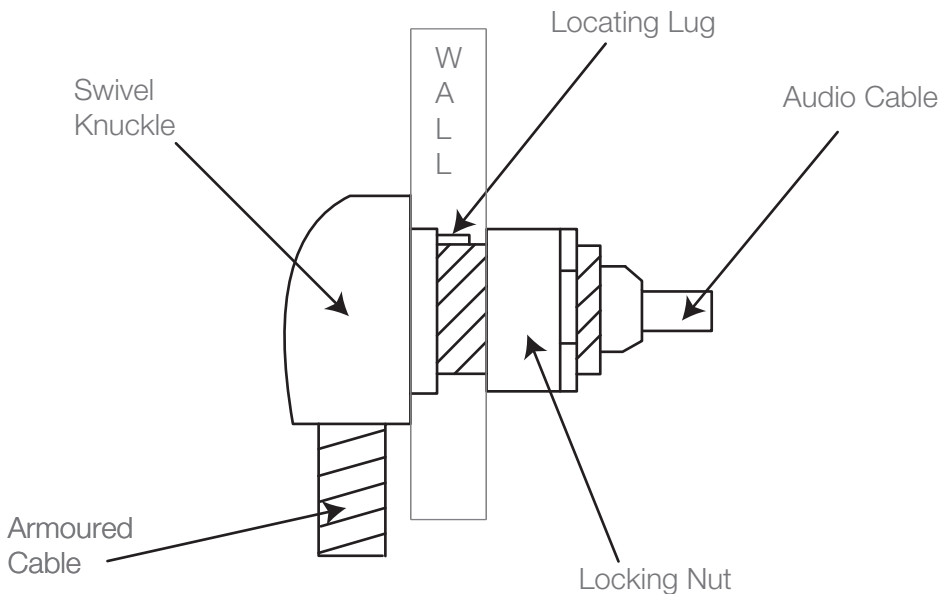

Why is this important? It limits movement of the cable to 45 degrees and provides a sound anchor point. This means that the cable cannot be constantly twisted round and round which quickly causes a fracture of the inner cable rendering the headphones useless and requiring an expensive service call.

There are cheaper alternatives, and some may even be 'on sale' but there's a reason why our headphones are considered great value, the best available for public use and last longer in everyday use - they are properly engineered for the application and have undergone continual development since we supplied them first to Virgin and Our Price record stores almost 20 years ago for use with their listening posts.
