

## AUDIO TOUR GUIDE

### ■ What is it?

The Audio Tour Guide is a easy to operate tour guide solution that will provide personal interactive audio interpretation for museums, heritage and attraction sites.

### ■ How does it work?

As visitors walk around the site they are able to activate audio messages by pressing corresponding exhibit numbers and pressing the play button. The audio can be heard by listening to the handsets in-built speaker (telephone style). The handset also features 2 head-phone sockets so we can supply headphones for visitors who would prefer not to hold the handset to listen. Personal induction loops are also available.

When the handset is playing a message it can be paused, volume increased or skip to next track. Multi-language options are available and each handset will hold just over 1,000 minutes of high quality audio, but this can be increased if required.

The programming and updating of the audio handsets can be done by us and delivered to you ready to play. Or, if you prefer we can supply the software which will allow you to create and update your own audio tours via the drag and drop software interface.

How is it fitted?

The audio tour guide requires no fitting as they are “stand alone” hands on units. The charging and programming dock is used as a storage device for the handsets when not in use. We have 2 docks available, a 10 or 50 way.
