

## PLASTIC HANDSET

### What is it?

Its an audio handset made from tough PET alloy plastic. The audio cable is fed through an aircraft grade steel armour core cable meaning the handset not only looks great but it can also withstand the rigours of the public environment.

### How does it work?

The audio handset contains a small quality speaker which you can connect to your audio playback device such as blackbox-av's SB Lite.

A setup like this allows you to connect buttons to the SB Lite which in turn will activate messages and playback crisp sounding audio to your audience.

### How is it fitted?

The handset comes with a cradle to allow you to mount the handset where ever your require. The connecting cable end of the amour cabled wire features a grommet although we advise upgrading to a 90 degree swivel grommet at extra cost. The swivel grommet prevents the cable from fracturing if users over twist the cable and extends the life of the plastic handset.

90 Degree  
Swivel Grommet
