

## U-TURN ROUND

Richard Burton Trail, Afan Valley

### What is it?

The U-Turn Round is our unique self powered external wind up audio interpretation unit.

It's designed to be used in remote outdoor environments such as nature trails, scenic views, SSSI's and play areas.

### How does it work?

Simple...the visitor selects a message from the 8 available, turns the handle round until the audio track begins to play. Then - relax and listen.

### How is it fitted?

U-Turn Round can be mounted onto a pole, fixed to a wall or fitted into an interpretation sign.

Panel Mounted, Marine Lake.

Wordsworth House and Garden.

## Volume Control

Each U-Turn comes with a volume dongle. To adjust the volume level insert it, select position 1, wind the handle and remove when the required level is reached.

## User Playback Statistics

Using the volume dongle, select position 2 and turn the handle. The U-Turn will recite the total number of times the messages have been played.

## Optional Extras

### Programmer

A portable programmer is available if you want to update content on the U-Turn yourself.

blackbox-av are able to convert and upload audio content prior to shipping if preferred.

## Installation

U-Turn Round can be mounted onto a pole, fixed to a wall or fitted into an interpretation sign.

## Batwings

The “Bat Wings” can be customized with instructions or logos in an array of colours. See our website for full details of colours and options.

## Specifications

Weight: 8KG  
Face size: W 266mm x H 265mm  
Depth size: Bottom 165mm / Top 115mm  
Warrenty: 1 Year return to base.

## FEATURES

### No Electricity Required

The U-Turn Round is powered by the visitor winding the handle - a few turns of the handle will supply enough power to charge capacitors that provide power to play back the entire audio message.

This means that you can install the U-Turn in almost any environment without having to worry about running cables to power it.

### High Durability For Outdoor Use

Now in it's its third generation design, the U-Turn concept has been steadily developed into this extremely robust design. It's made from marine grade stainless steel enabling it to resist both weather and vandal attacks.

Our electronics are housed in a IP65 rated box protecting against water or dust.

### Up to 8 Audio Track Selections

The U-Turn can store 8 pre-recorded audio files ranging from audio voice over, animal calls through to symphonies.

The maximum length is 48 minutes at 11khz or 24 minutes at 22khz. We recomend an average message length of 90 seconds.

Any audio file can be converted using our audio encoding software which you can download free from the support page on our website.

### Environmentally Friendly

Powered by 100% renewable wind up energy, 90% of the unit's components are recyclable.
